Introduction

The Generic Mobile Sales and Inventory Management System with CMS for Coffee Shops. Developed as an IT Capstone Project by John Mark Vincent Yambot, John Francis Melgarejo, and Jhasmine Bartolay, this program assists the owner and staff in tracking inventory, managing sales, processing supplier orders, and monitoring profitability. It replaces the traditional notebook-based manual process with a centralized, secure, and accessible digital solution

System Requirements

Only mobile devices (tablet, phone) can run a modern mobile application. A stable internet connection is required for all functions.

Keeping your Credentials

Your account was created for you by the Admin. Your Username is unique and cannot be changed. Please keep your password secure and do not share it

Support and Feedback

Technical support and feedback may be directed to any of the contacts below.

Developer email	yamzvince@gmail.com

Account Types

There are 3 current account roles in the system.

Module / Functionality	Staff	Admin

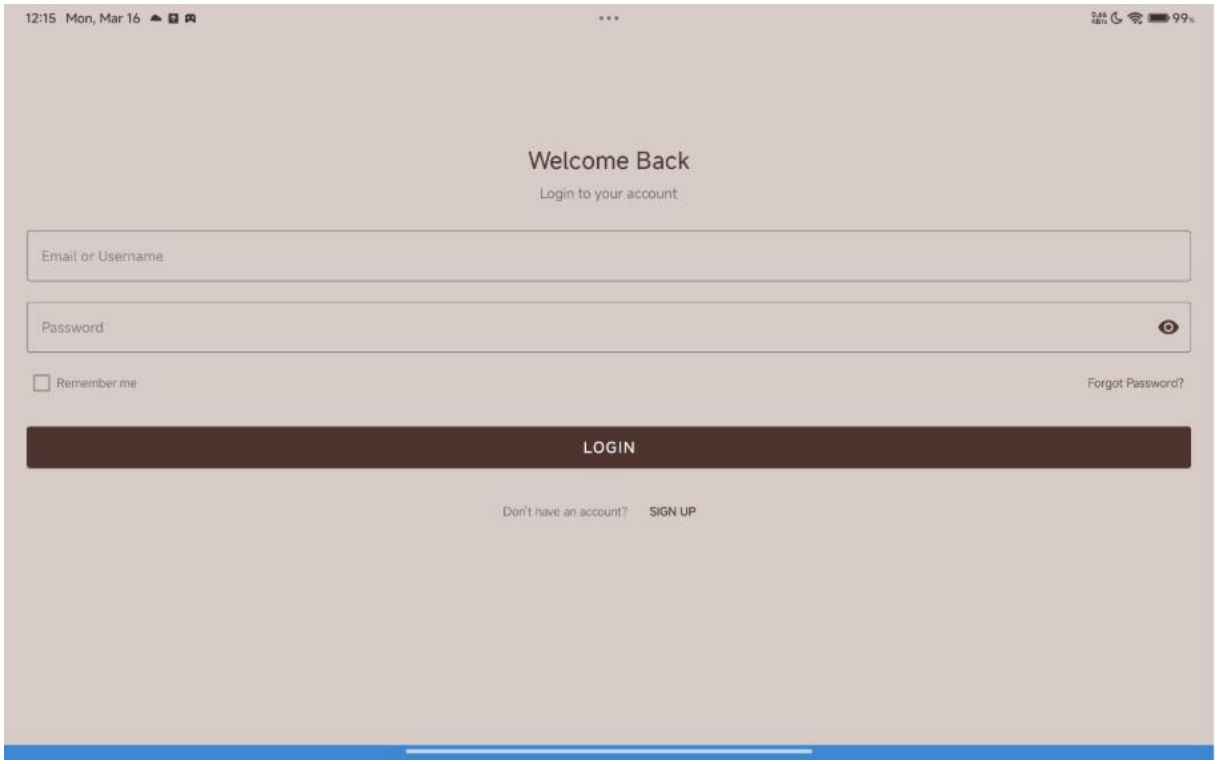
A Complete Step-by-Step Guide to Managing Your Store

Welcome to your Sales and Inventory Point-of-Sale (POS) application!
This system is designed to seamlessly connect your front-end sales with your back-end inventory. It includes smart mathematical features that automatically convert and deduct exact measurements (like milliliters from liters) whenever you make a sale.

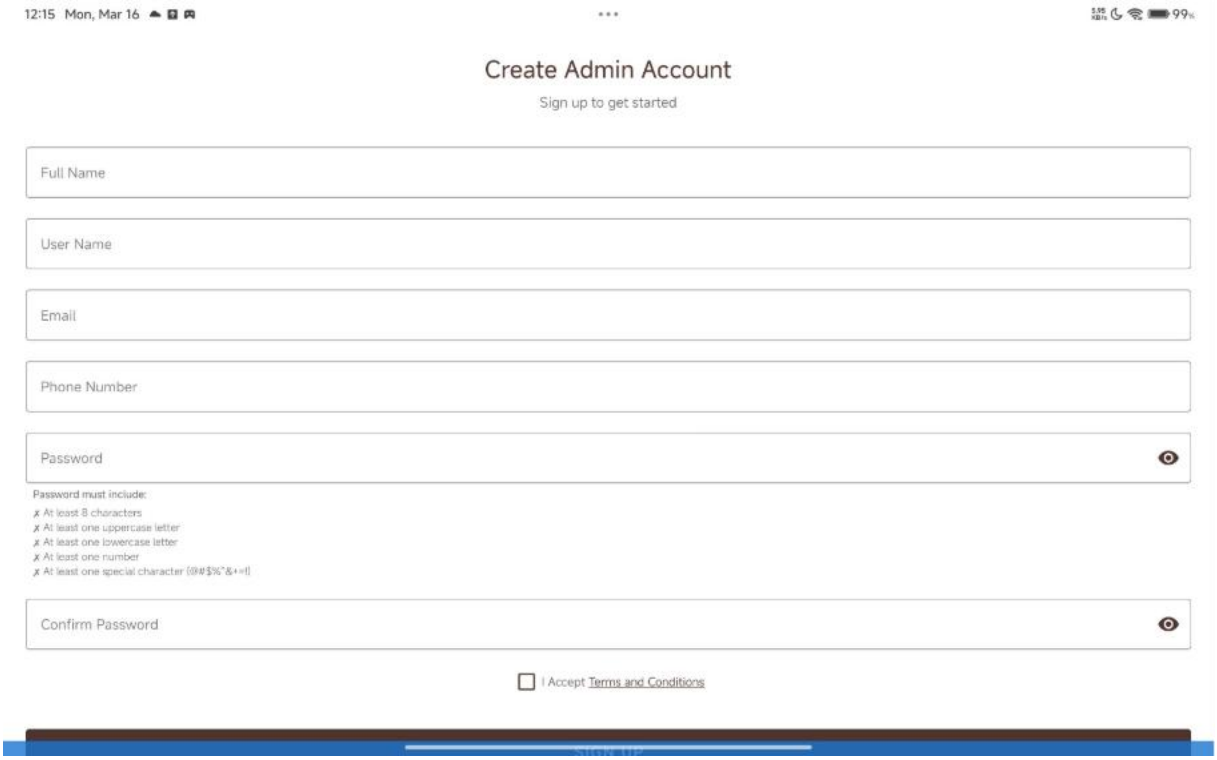
Getting Started & Logging In

The app features a smart login system that automatically recognizes your role (Admin or Staff).

1. **Open the App:** You will be greeted by the Sign-In screen.
2. **Enter Credentials:** Type in your Email (or Username) and Password.
3. **Login Routing:**
   - Admins: You will be taken directly to the main Dashboard where you can see all your business analytics.
   - Staff: You will be taken to the POS/Sales interface with limited access (cannot add products or view reports unless authorized).
   - *Note:* If this is your first time logging in, the system will verify your email and automatically approve your Admin account.



How to Register Account



1. Click “SIGN UP” below the Login button.
2. Enter your first and last name exactly as you want it to appear on your profile.
3. Provide a valid email address that you have access to.
4. Enter your mobile phone number, format example: (*09221113333).*
5. Choose the role that best matches your position or purpose within the platform.

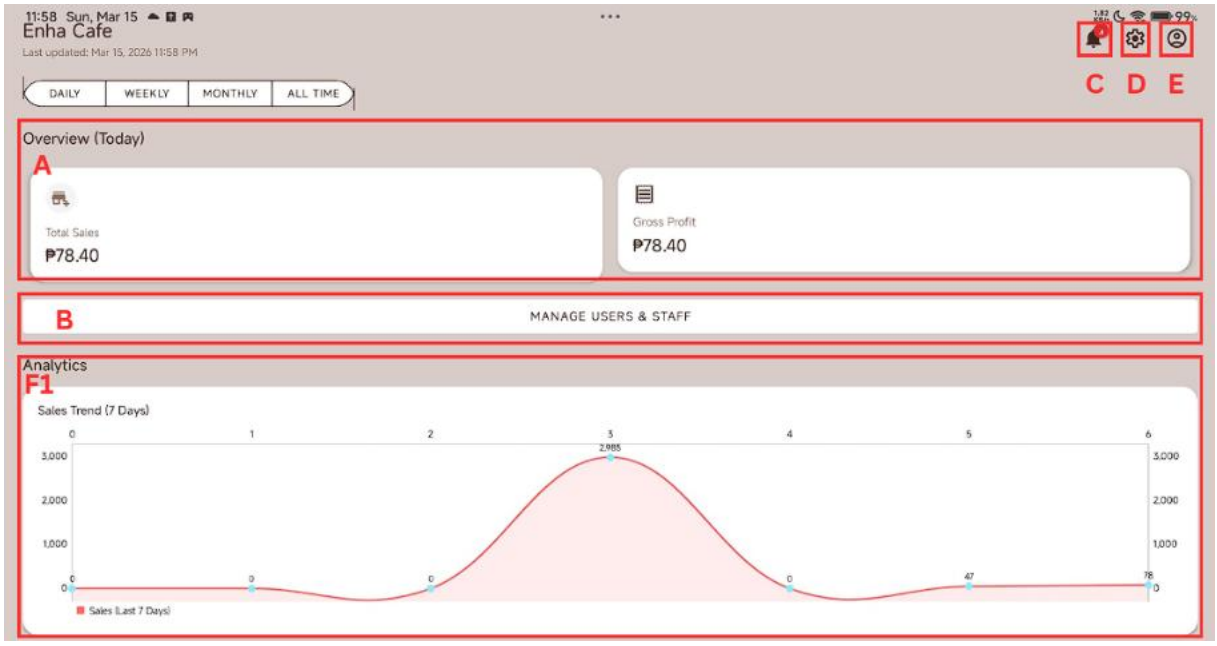
6. Create a secure password following your system's requirements (e.g., minimum length, symbols, etc.).
7. Re-enter the same password to make sure there are no typos.
8. Click SIGN UP to complete your registration.
9. If any fields are missing or incorrect, the system will prompt you to fix them before proceeding.

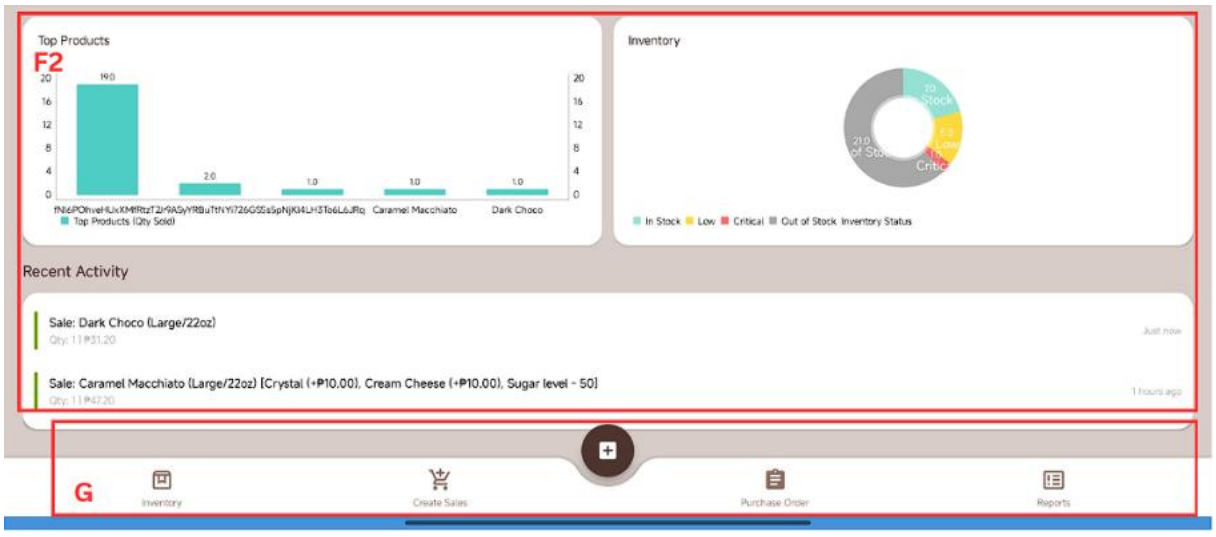
How to Reset a Password

For security reasons, there is no public "Forgot Password" link. If you forget your password, you must contact the Admin. They will manually reset your password, which will generate a new temporary password for you to log in with, just like your first time.

The Dashboard

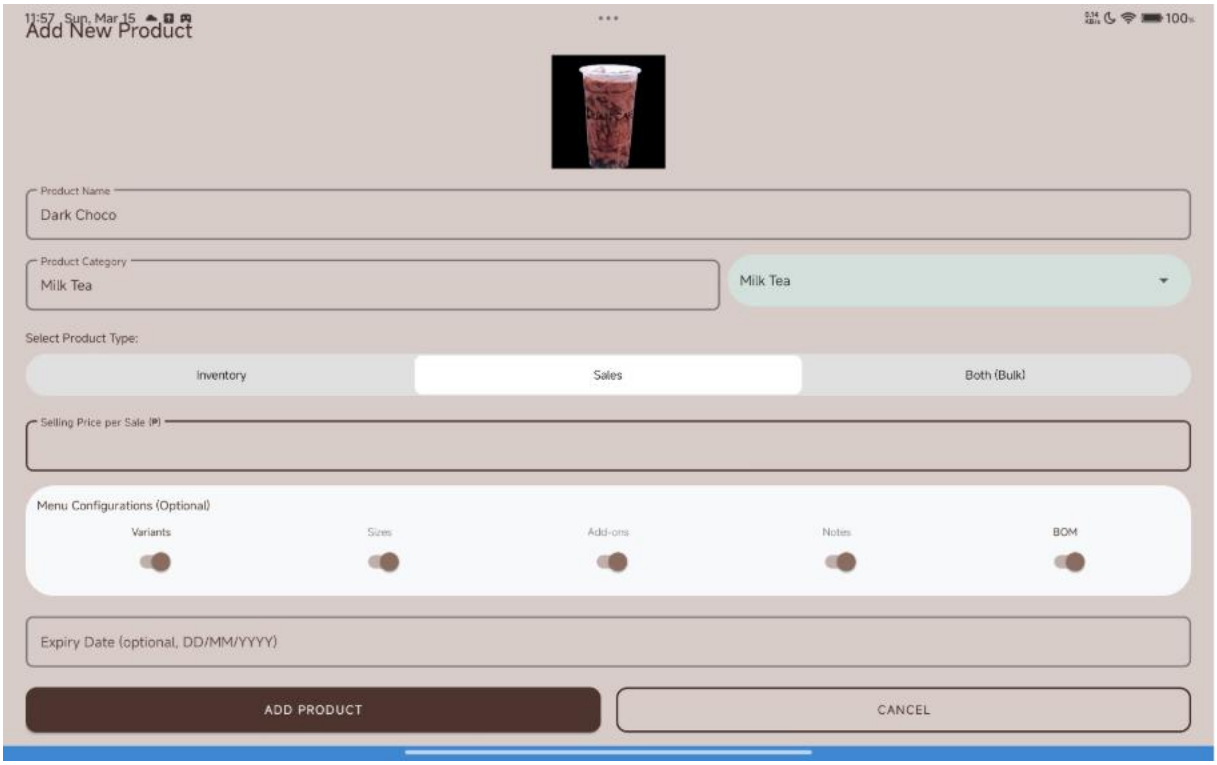
Anatomy





Label	Component	Description
A	**Quick Overview**	Your main menu for navigating all modules you have permission to see.
B	**Manage Users**	*(Admin only)* Allows you to filter all dashboard data by a time range (Today, Week, Month, All Time) and Adding or Creating.
C	**Notification**	The system monitors stock levels against a pre-set "Reorder Point." When an item falls below this level, the system triggers an alert.
D	**Settings**	The Settings section allows you to customize the system interface and manage your data safely. This guide covers Color Themes, Backup Data, and Restore Data. .
E	**Profile**	The Profile section allows you to view and update your personal information, manage your account, and Log out of the system.
F1-F2	**Analytics**	Includes "Sales Trend", "Top 5 Selling Products" (bar chart), "Slow Moving Products," and "Low Stock Items".
G	**Quick Actions**	Displays six key metrics: Create Sales, Add Product, Create P.O, View Reports, Inventory, Categories.

Add New Product



1. Product Identity & Variants (The Foundation)

Show how the system categorizes a base drink while allowing for different physical versions.

- **Product Name:** Signature Latte
- **Category:** Hot Beverages
- **Variants (Sizes):** Create **8oz (Small)**, **12oz (Medium)**, and **16oz (Large)**.
- **Demo Highlight:** Show how each size has a different **Cost Price** (milk/beans used) and **Retail Price**.

2. Dynamic Add-ons (The Upsell)

This is where the Barista interacts with the POS. During setup, you define "Modifiers."

- **Milk Alternatives:** Oat Milk (**₱** 10), Almond Milk (**₱** 10), Soy Milk (**₱** 12).
- **Extra Shots:** Single Espresso Shot (**₱** 15).
- **Syrups:** Vanilla, Caramel, Hazelnut (**₱** 10).
- **Logic:** Demonstrate that selecting "Oat Milk" doesn't just change the price—it tells the inventory to deduct from the **Oat Milk Carton** stock instead of the **Whole Milk** stock.

3. Special Notes (The Experience)

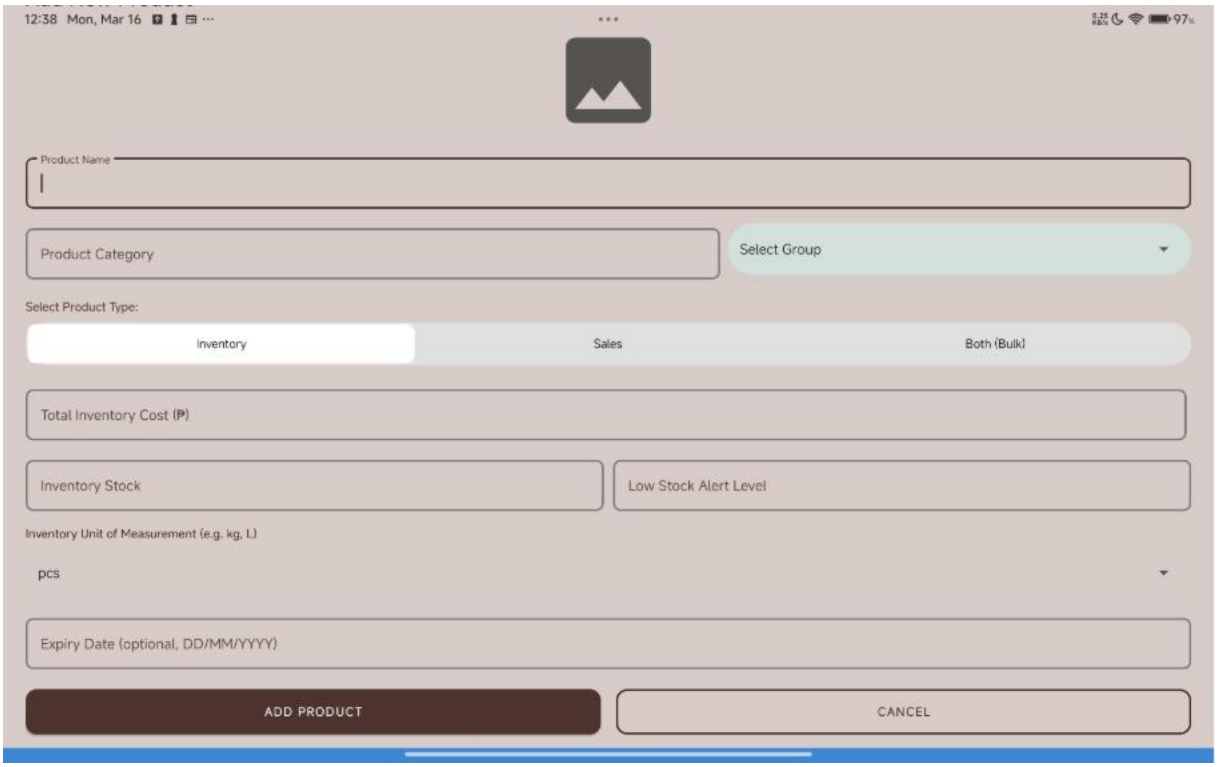
- **Common Inputs:** Sugar level preferences by the customer: (e.g., Sugar level 10%, 25%, etc...)

4. The Bill of Materials (BOM) / Recipe

This is the "brain" of the inventory system. For coffee shops, inventory isn't sold by the "unit," but by the **gram** or **ml**.

Ingredient	Quantity	Unit	Inventory Impact
Espresso Beans	18	grams	Deducts from 1kg bag
Whole Milk	250	ml	Deducts from 1L carton
Signature Syrup	20	ml	Deducts from 750ml bottle
Paper Cup (12oz)	1	unit	Deducts from sleeve of 50
Plastic Lid	1	unit	Deducts from box of 500

Managing Your Inventory (Adding & Editing Products)

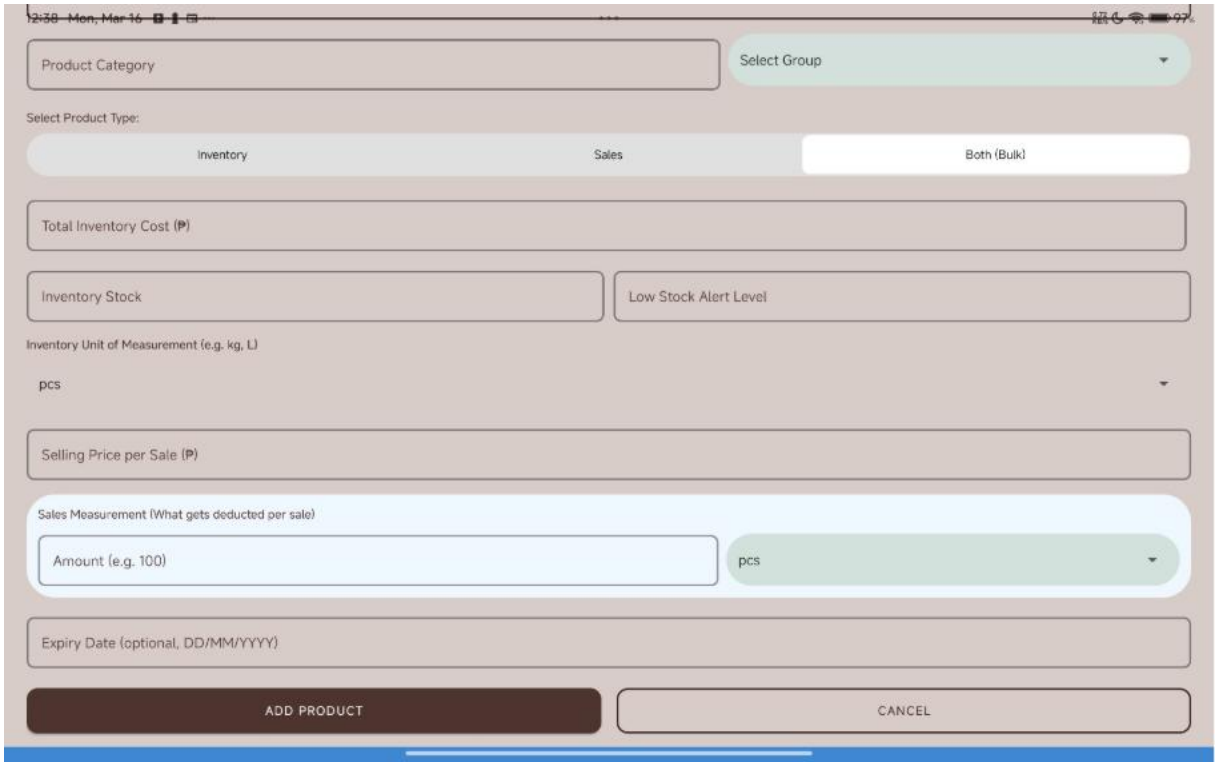


The app separates your items into two main categories: **Inventory** (Raw Materials like Coffee Beans or Milk) and **Menu** (Sales Products like a 12oz Latte).

Adding Raw Materials (Inventory)

1. Go to the **Dashboard** and tap the + (Add Product) floating button.
2. Select the **Inventory Only** tab.
3. Fill in the details:
   - **Name:** e.g., "Fresh Milk"
   - **Quantity:** Enter your bulk stock (e.g., 5). The app supports decimals!
   - **Unit:** Select the bulk measurement (e.g., L for Liters, kg for Kilograms).
   - **Cost Price:** How much did you pay for it.
   - **Critical/Low Stock Levels:** Set numbers to trigger low-stock alerts.
   - Tap **Save**

Adding Menu Items & Connecting the Recipe (BOM)



To sell a drink and have it automatically deducted from your raw materials, you use the Recipe / BOM (Bill of Materials).

4. Tap the + (Add Product) button and select the Sales Only tab.
5. Enter the Name (e.g., "Latte") and the Selling Price.
6. Scroll down to Product Configurations and toggle Link Ingredients (Recipe BOM).
7. A popup will appear. Tap Add Row.
8. Link the Material: Search for and select your raw material (e.g., "Fresh Milk").
9. Set the Deduction: Enter how much is used per cup (e.g., enter 200, and select ml as the unit).
10. Save. Now, every time you sell 1 Latte, the system will accurately deduct 200ml (0.2L) from your 5L milk stock!

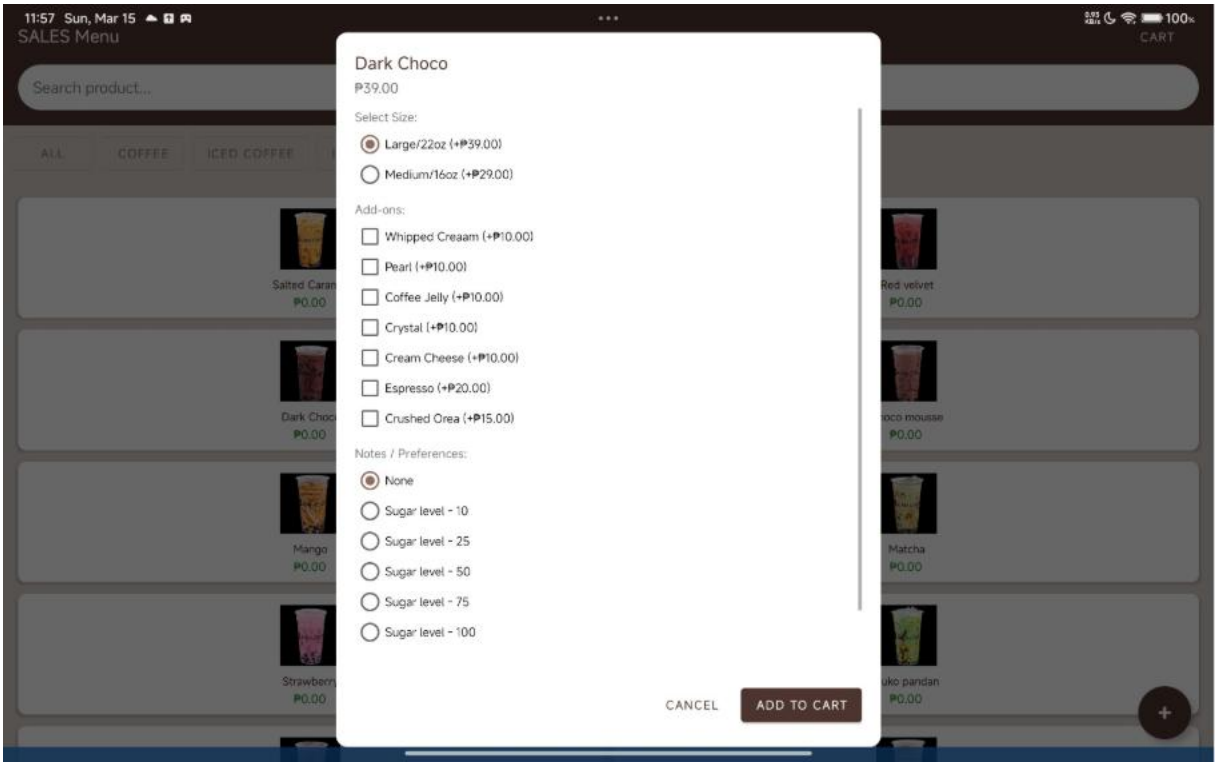
2. Manually Increasing or Decreasing Stock

Sometimes you need to manually adjust stock due to spills, damage, or quick counts.

- **Quick Adjustments:** Go to the Inventory tab. Find your product and simply tap the (+) or (-) buttons on the item card to instantly add or remove 1 unit.

Batch Operations: For larger manual edits, go to Batch Stock Operations. Here, you can select multiple items at once and choose to "Add Stock," "Subtract Stock," or "Set Stock Level" (e.g., typing in a precise decimal like 4.5).

Processing Sales (The POS System)

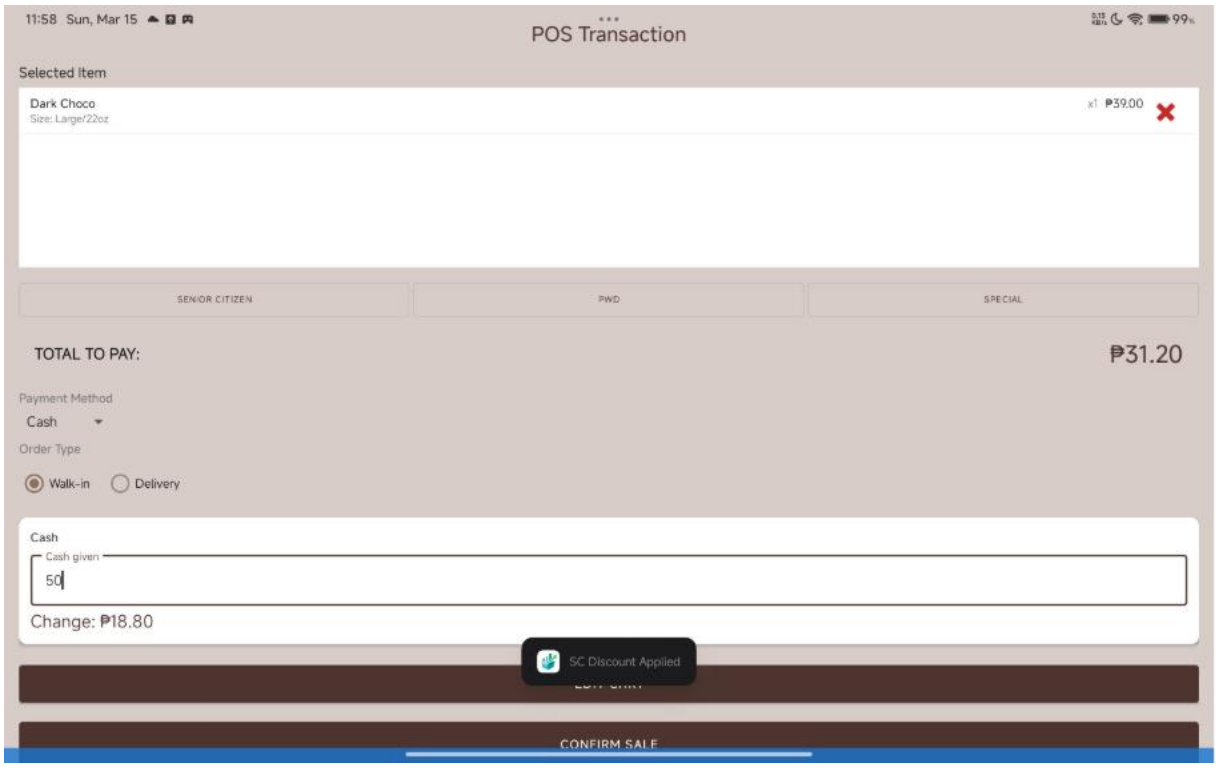


The Sales Screen is where you take customer orders. It handles variations, carts, and automatic inventory math.

A. Taking an Order

1. Go to the **Sell** screen. You will see a list of your Menu items.
2. Tap an item to add it to the cart.
3. If the item has Configurations (Sizes, Variants, or Add-ons set up in the Edit screen), a popup will ask you to select the customer's choice (e.g., Size: Large, Add-on: Extra shot).
4. Tap Checkout to view the cart.

B. Checkout & Payment



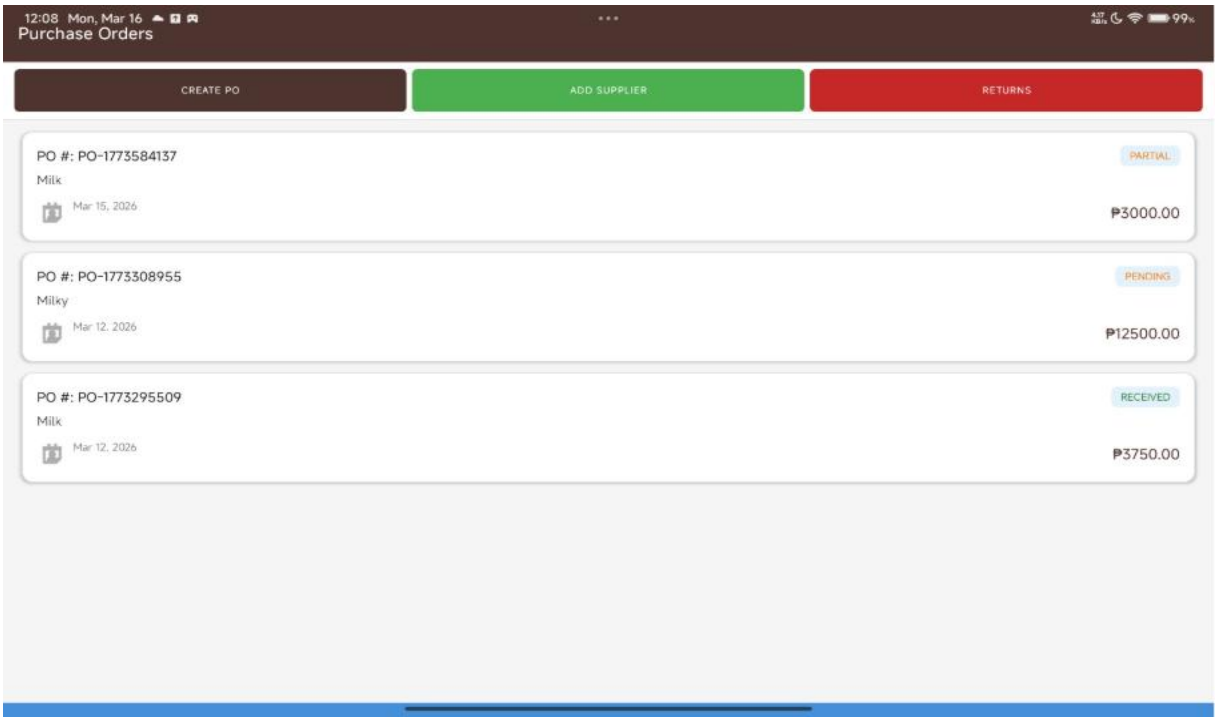
1. In the Cart screen, you can review the items. Tap Edit Cart if you need to change the quantities.
2. Apply Discounts (Senior Citizen, PWD, or Custom Manual percentage) using the buttons at the top. The total updates are automatically.
3. **Select Payment Method:**

- **Cash:** Enter the amount the customer handed you. The app will calculate the exact Change.
- **GCash:** Enter the GCash Reference Number and tap the camera button to take a photo/upload the GCash receipt for proof.

4. Toggle Delivery if this is a delivery order and enter the customer's details.
5. Tap Confirm Sale.

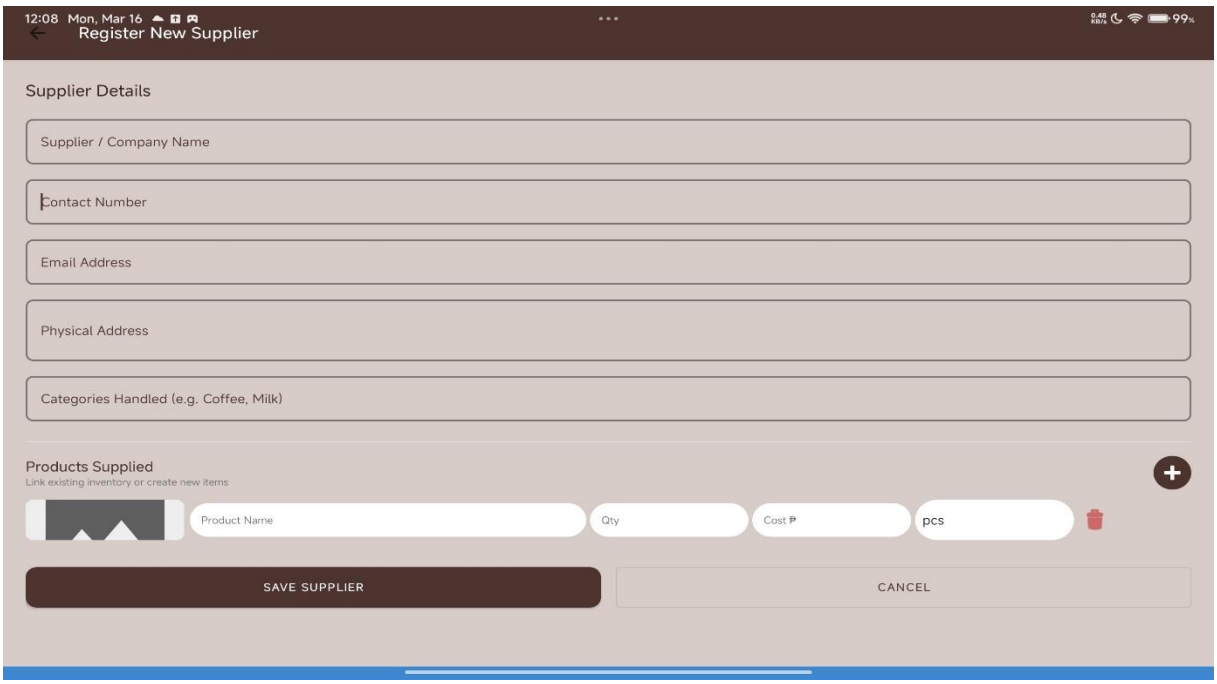
Behind the scenes: The app immediately looks at the BOM for every item in the cart, converts units (like ounces to milliliters to liters), and deducts the exact fractional amount from your raw inventory!

Purchase Orders & Suppliers



To restock your raw materials officially, use the Purchase Order (PO) system.

How to Create a Purchase Order

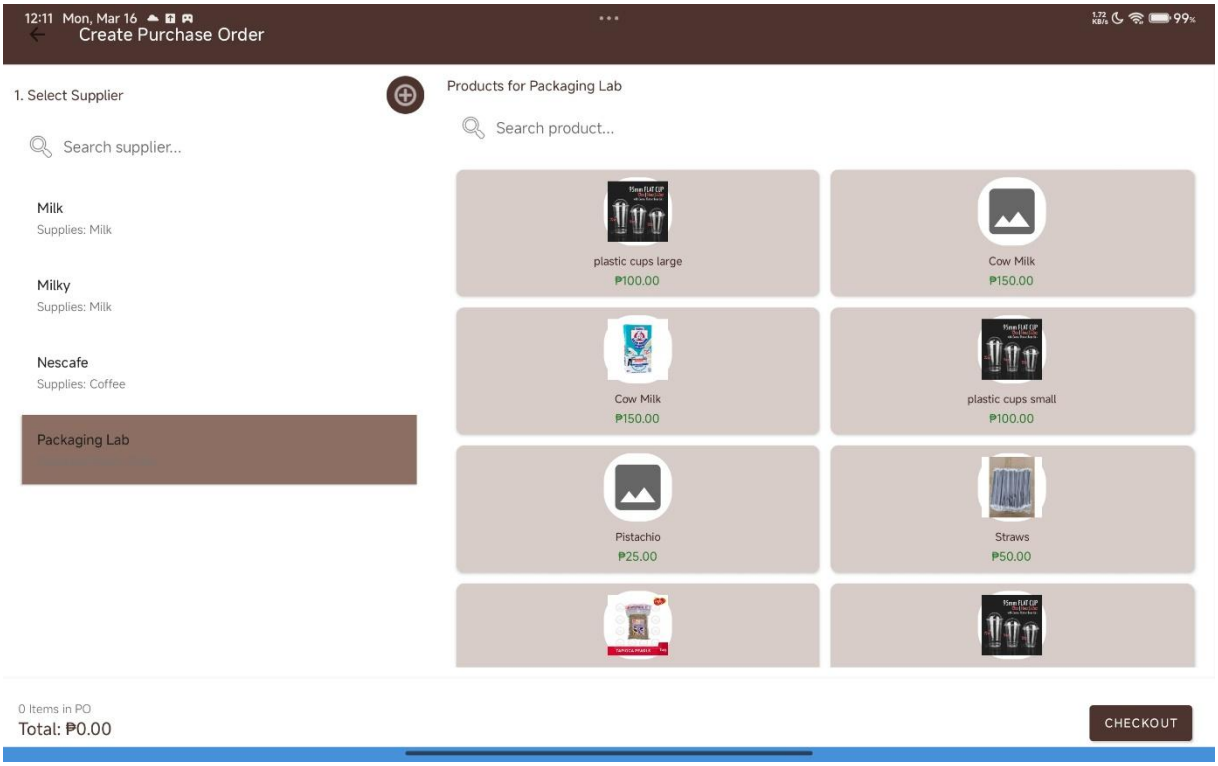


1. Click “+” to create a purchase order.
2. Enter the Supplier Name from whom you are ordering the products.
3. Order Date: Enter the date the order is being placed (usually today).
4. Expected Date: Enter the date you expect to receive the products.
5. Use the Notes field to include any special instructions for the supplier.
6. Examples:

- “Deliver before 10 AM”
- “Pack fragile items carefully”
- “Include expiry dates for perishable items”

7. Click “Add Item” then select the product from your inventory or catalog.
8. Enter the following details for each item:

Creating a Purchase Order



1. Go to Purchase Orders from the Dashboard.
2. Tap to create a new PO. Select your Supplier from the dropdown.
3. Add the items you are ordering and the expected cost.
4. Set the status of Pending.

Receiving Stock & Returns

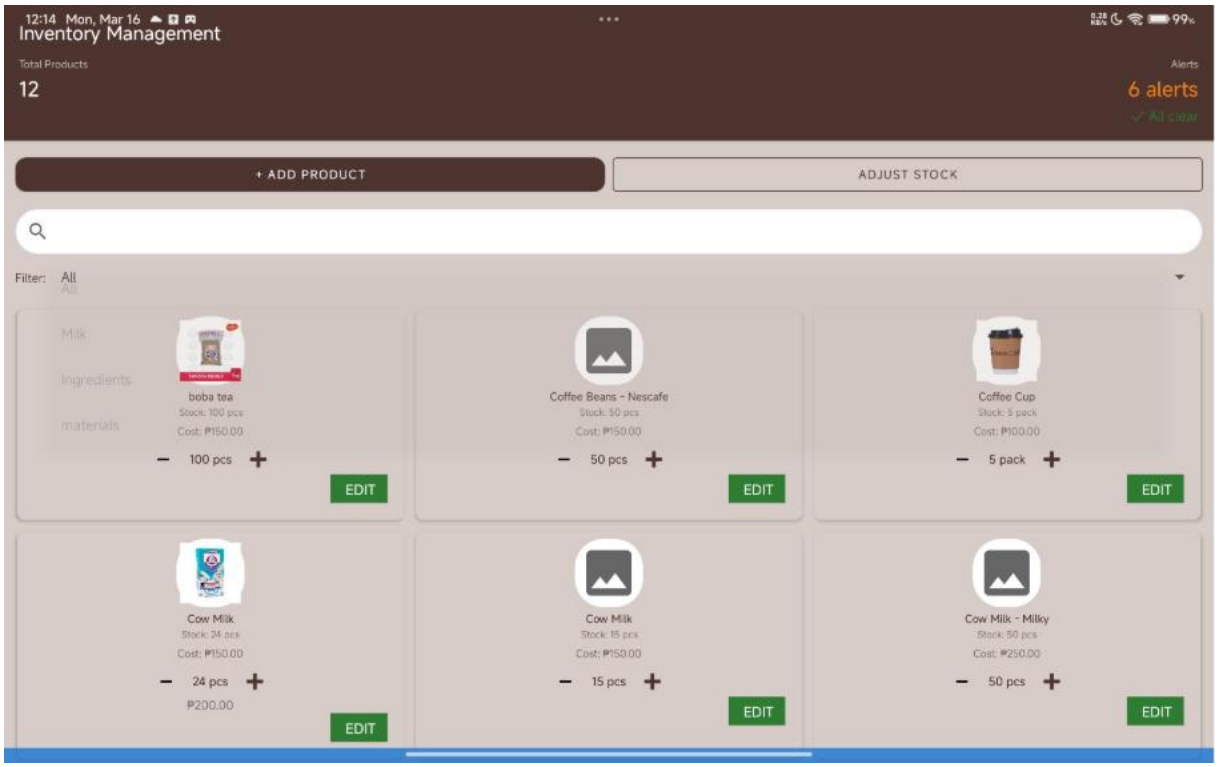
1. When the delivery arrives, open the Pending PO and change the status to Received. The app will automatically add the purchased quantities to your Inventory!
2. Returns: If the supplier delivers damaged or expired goods, open the Return Product

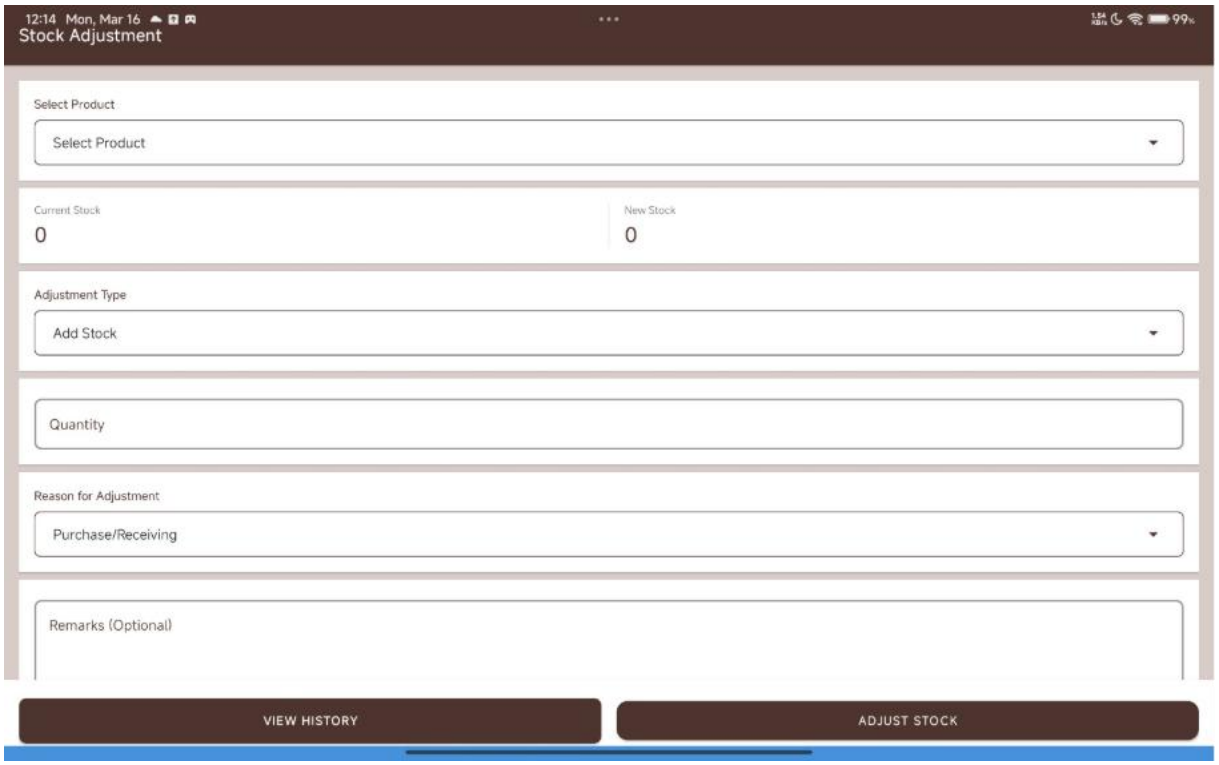
screen. Select the Supplier, input the damaged items, and the system will log the return and cleanly deduct those damaged items back out of your stock.

Inventory

This module is where you view and manage all your products. Admins can add, edit, and adjust stock here.

Anatomy

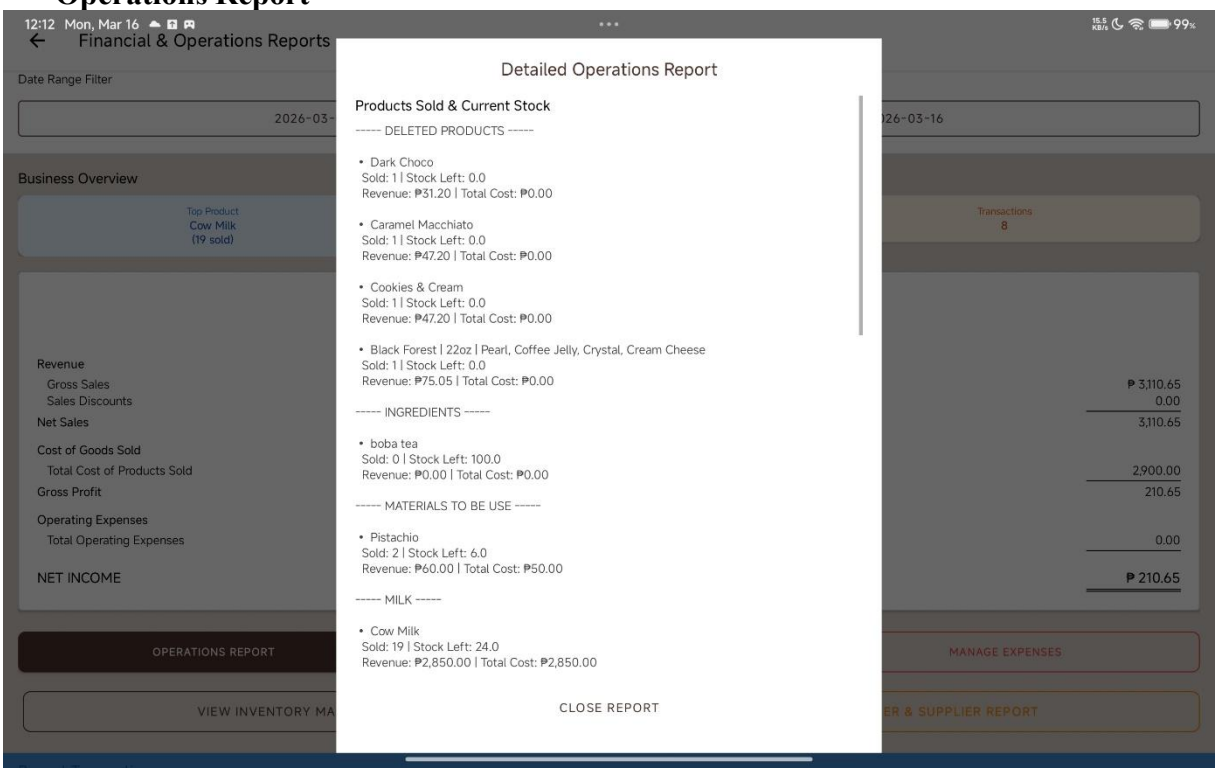




How to Adjust Stock:

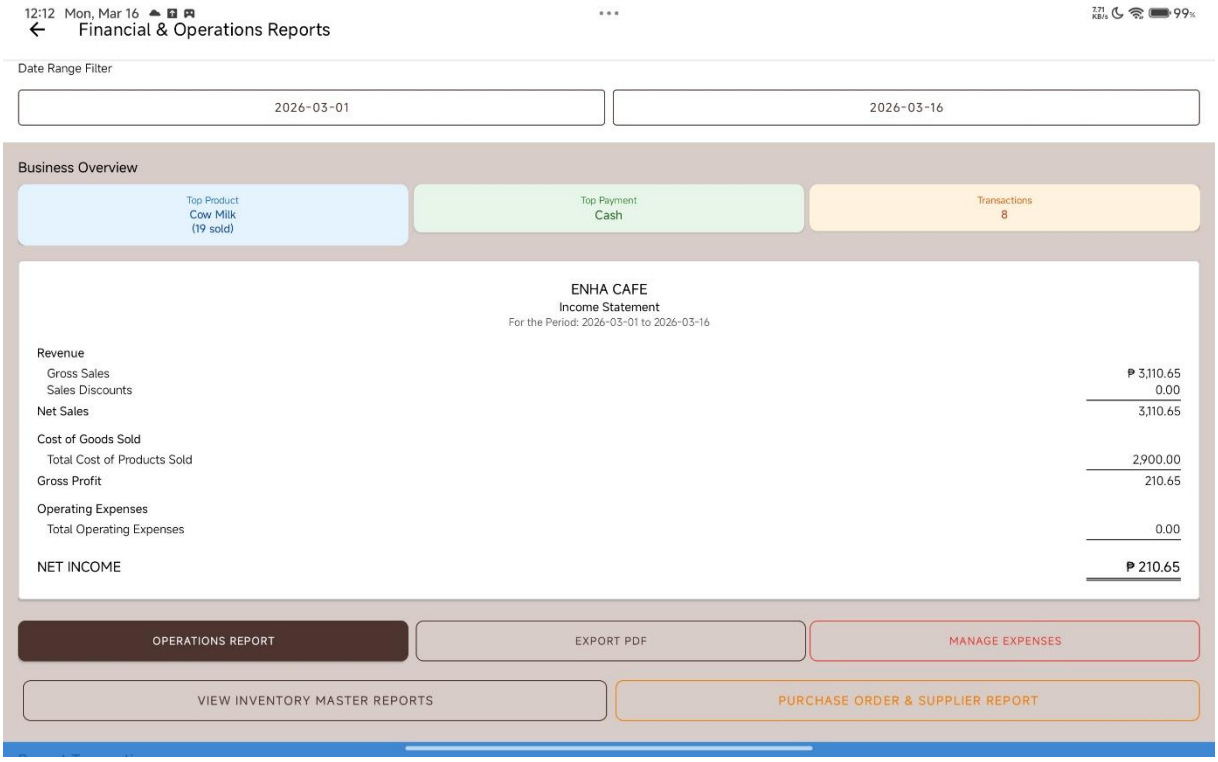
1. Go to Inventory → Stock Adjusment.
2. Select the item you want to modify.
3. Choose the type of adjustment:
   a. **Increase Stock** – Add quantity to the existing stock.
   b. **Decrease Stock** – Reduce stock due to damage, loss, or corrections.
4. Enter the adjustment quantity.
5. Review the change.
6. Click Confirm or Adjust Stock.

Operations Report



1. **Purpose:** Combines multiple data points (sales, inventory, expenses) into one report.
2. Click to view a full summary.
3. Can include:
   - Total sales
   - Stock updates
   - Supplier orders
   - Discounts and promotions

Overall Summary Reports



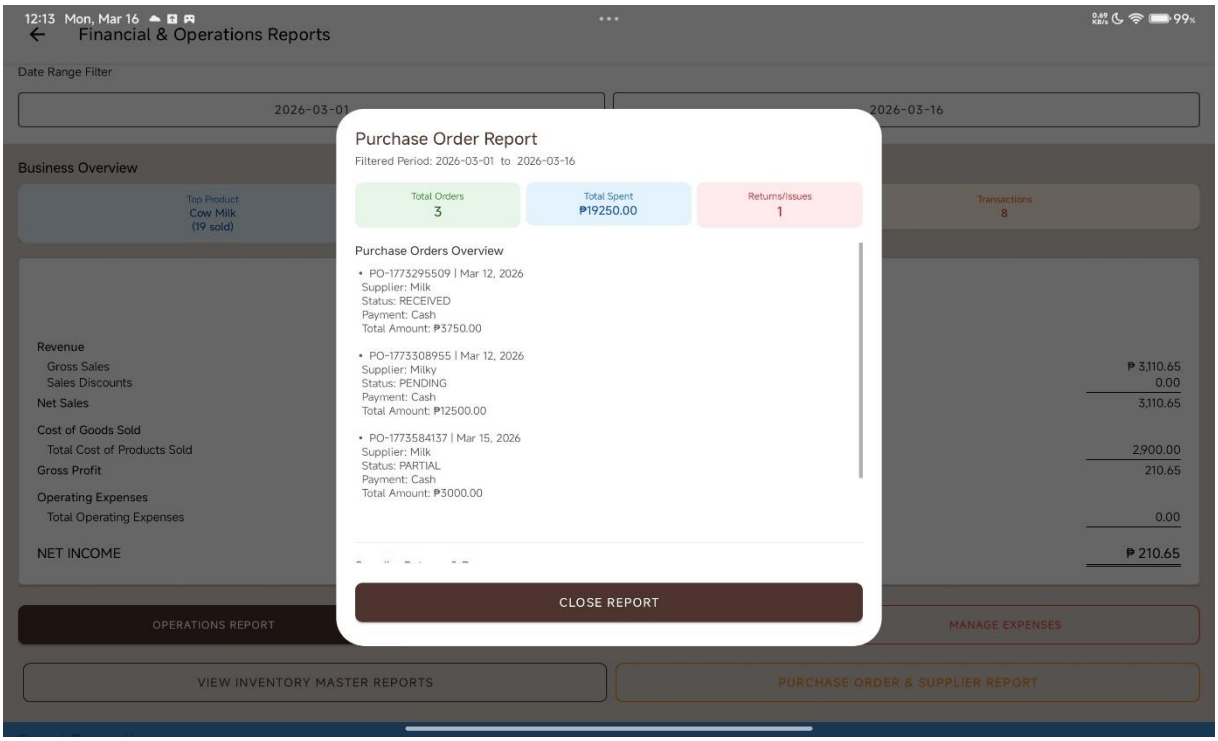
1. **Purpose:** Provides a quick summary of business performance in PDF format.
2. Click Overall Summary.
3. Choose the **date range** and **filters** if available.
4. Click **Export PDF** or **Generate PDF** to save or print the report.

Manage Expenses

Show how the CMS allows the owner to categorize spending.

- **Operating Expenses (OpEx):** Rent, Electricity, Water, Internet.
- **Labor Costs:** Daily wages for baristas or cleaning staff.
- **Consumables:** Cleaning supplies, napkins, or stirrers (items not tracked by BOM but still cost money).
- **Marketing:** Social media ads or printed flyers.

Purchase Order Reports



PO Number: The unique tracking ID for the order.

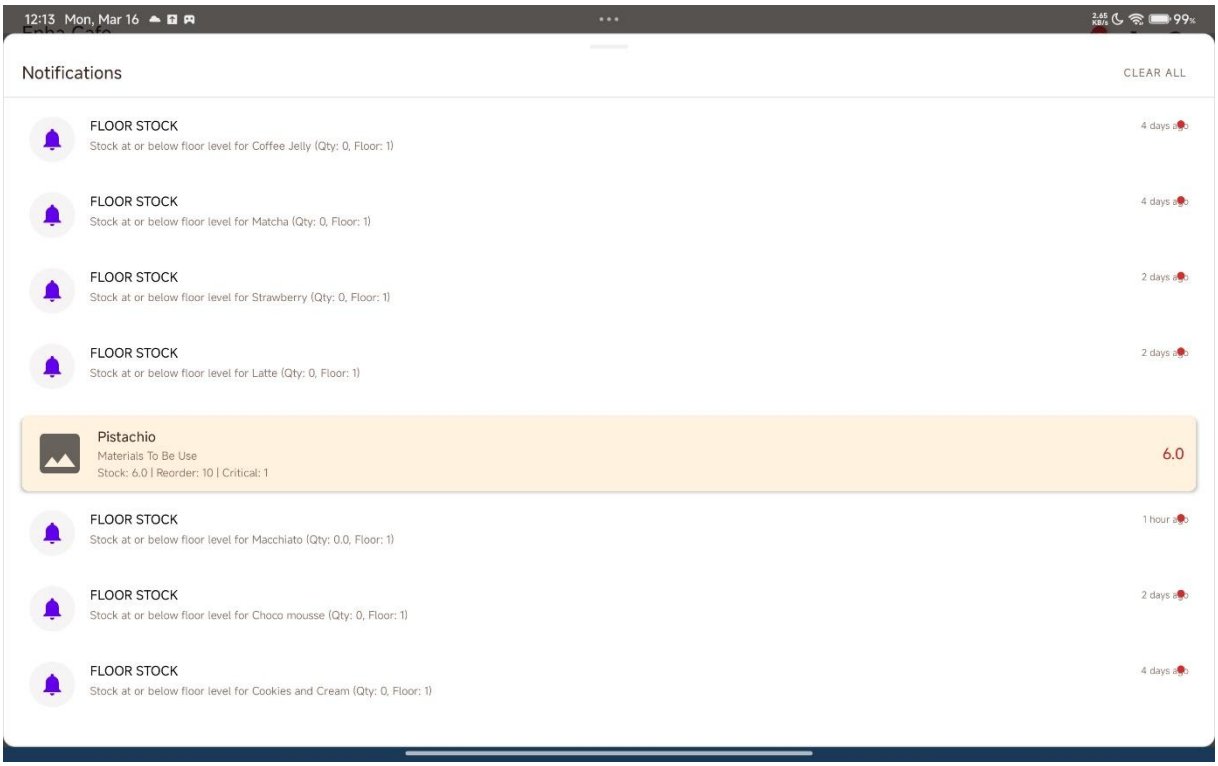
Supplier Name: (e.g., "Mountain Roast Coffee Co." or "Local Dairy Farm").

Status: Is it **Pending** (ordered but not here), **Received** (in the warehouse), or **Cancelled**?

Total Cost: The amount owed to the supplier.

Date Created vs. Date Received: This shows the **Lead Time** (how long it takes for your beans to arrive).

Notifications



Low Stock Items

1. **Purpose:** Identify products that are running low and need to be reordered.
2. Steps:
   - Click on Low Stock Items.
   - The system will display products below the minimum stock level.
     Example:
     - Flour – 5 KG (minimum stock: 10 KG)
     - Chocolate Donuts – 10 PC (minimum stock: 20 PC)

Near Expiry

1. **Purpose:** Identify products that are approaching their expiration date to prevent waste.
2. Steps:
   - Click Near Expiry Items.
   - The system will display products that will expire soon.
   - Act such as:
     - Selling them quickly (promotions or discounts)
     - Using them in preparation if ingredients
     - Returning or discarding if necessary

Manage Users

The Manage Users function allows administrators to add, edit, or remove user accounts and control their access permissions in the system. This ensures proper account management and security.

Access Manage Users

1. Log in as **ADMIN** or a user with management privileges.
2. Navigate the Settings or User Management menu.
3. Click **Manage Users** to view the list of all users.

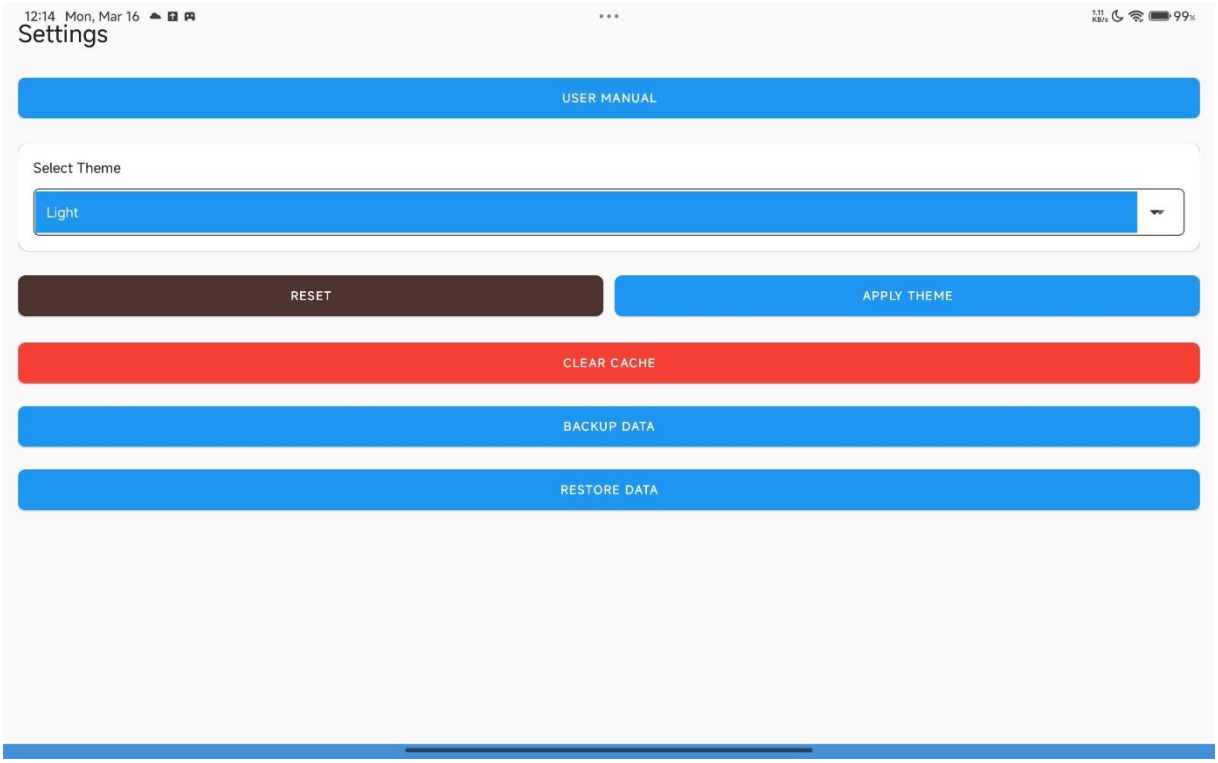
Pending Staff Accounts

- **Purpose:** Review and approve staff accounts that are awaiting activation.
- Steps:
    1. Click Pending Staff or Pending Accounts.
    2. Review of the account details submitted by the staff:
        - Full Name

- Email Address
- Phone Number
- Requested Role (if provided)
- **Approve** the account to activate it or **reject** if the request is invalid.

3. Once approved, the account moves to the active users list, and the staff can log in.

Settings



Color Themes

1. **Purpose:** Customize the appearance of your system interface.
2. **Steps:**
    a. Click on Select Themes.
    b. Choose a theme from the available options (e.g., Light, Dark, or Custom colors).
    c. The system interface will update automatically with your selected theme.

Backup Data

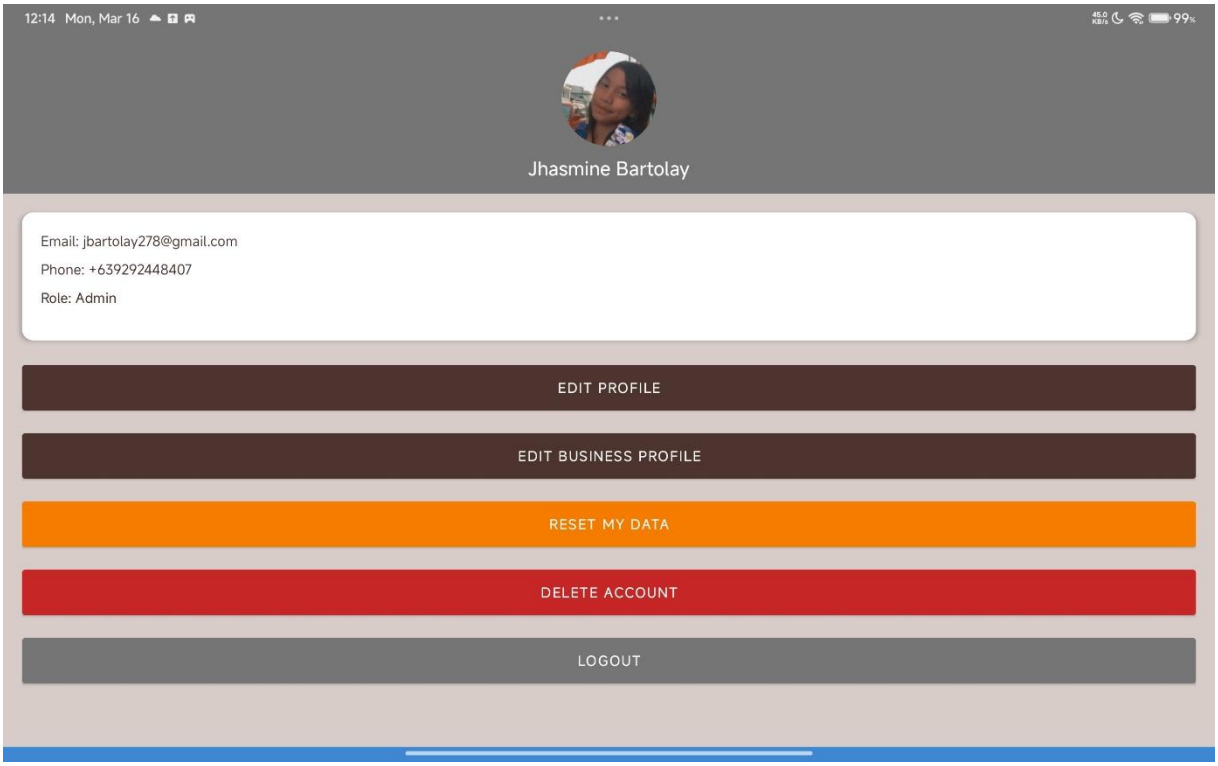
- **Purpose:** Create a safe copy of your system data to prevent data loss.
- Steps:
    a. Click Backup Data.
    b. Select the type of data you want to back up (if applicable).

c. Click Create Backup or Start Backup.
d. Save the backup file to a secure location (computer, external drive, or cloud).

Restore Data

- **Purpose:** Recover previously backed-up data to restore the system to a previous state.
- **Warning:** Restoring data may overwrite current data. Always backup your latest data before restoring.
- Steps:
    a. Click Restore Data.
    b. Select the backup file you want to restore.
    c. Confirm the restore action when prompted.
    d. The system will replace current data with backup data.

Profile



Overview

1. Display your personal image in the system.
2. Show your registered name in the system.
3. Display your registered email.
4. Display your contact number.

Edit Profile

1. **Purpose:** Update personal information such as Full Name, Email, Phone Number, and Profile Image.
2. Steps:
    a. Click Edit Profile.
    b. Make necessary changes.
    c. Click **Save** to update your information.

Reset Data

- **Action:** Wipes all Sales Transactions and Inventory Levels but **keeps** the Products, Categories, and Settings.

Edit Business Profile

- This manages the **brand information** that appears on customer receipts and invoices.

Delete Account (The "Exit")

- **Action:** Permanently removes the Shop, User, and all historical data from the Cloud.
- **Scenario:** The business is closing or moving to a different platform.

Log Out

1. **Purpose:** Safely exit your account to prevent unauthorized access.
2. **Steps:**
    - Click **Log Out**.
    - You will be returned to the login screen.
